Goats do not depend on intensive feeding systems except some supplemental feeding during growth, lactation, pregnancy and winter. Of course, when goats are in lactation for an extended period of time (i.e., 10 months), they will require supplemental feeding on a higher plane of nutrition (e.g., dairy quality second cut alfalfa hay and grain ration). Goats belong to the

Dairy product, milk and any of the foods made from milk, including butter, cheese, ice cream, yogurt, and condensed and dried milk. Cow's milk is by far the principal type of milk used in dairy products worldwide. Learn more about the types, nutritional content, 

The Dairy Production Stabilization Act of 1983 (Dairy Act) authorized a national producer program for dairy product promotion, research, and nutrition education to increase human consumption of milk and dairy products and reduce milk surpluses. This self-help program is funded by a mandatory 15-cent-per-hundredweight assessment on all milk produced in the

Supplementary feeding and feed budgeting for sheep

01.07.2019 · Dairy goats can be a key tool to achieve the UN 2030 Agenda for Sustainable Development, adopted in 2016, and its 17 interrelated sustainable development goals (SDGs). The livestock sector in general is shifting from its longstanding focus on production in isolation, to enhancing its contribution to all of the SDGs, including human nutrition, environmental
To help prevent coccidiosis in artificially reared dairy goats, the kids should be put in small, age-matched groups in outside, portable pens that are moved to clean ground periodically. Eradication is not feasible, but infection can be controlled through good management practices. Coccidiostats added to the water or feed are adjuncts to a management control program and not substitutes.
